Rhonda

SAFE | SIMPLE | EFFICIENT

Rhonda is an **easy-to-use system** for the **fast and reliable detection** of bacterial and viral pathogens, such as SARS-CoV-2. Its centerpiece is the disposable test cartridge *Rhonda disk* that directly receives a swab sample and contains all reagents necessary for a **multiplex PCR analysis**. The analyzer *Rhonda player* can run up to 2 test cartridges simultaneously in well under one hour - fully automatized. Rhonda provides results for close to **60 patients a day**, seven days a week!

“After two editions, Diagnostics-4-Future is an established international meeting-point for practitioners and providers in diagnostics”.

Dr. Michael Steinwand, Board member of BioLAGO e.V.

The infection control solution
